DPS Wall2Wall
system

What is the DPS Wall2Wall mounting system? Where can I use it?

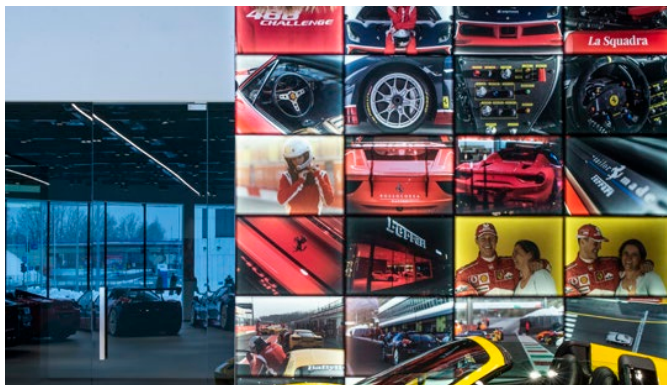

This innovative no-gap system for the installation of stretch membranes reduces the installation gap from eight millimetres to nearly zero. Installation in this system makes for an aesthetically outstanding look, be it a stretch ceiling or a stretch wall.

partition, decorative and acoustic walls

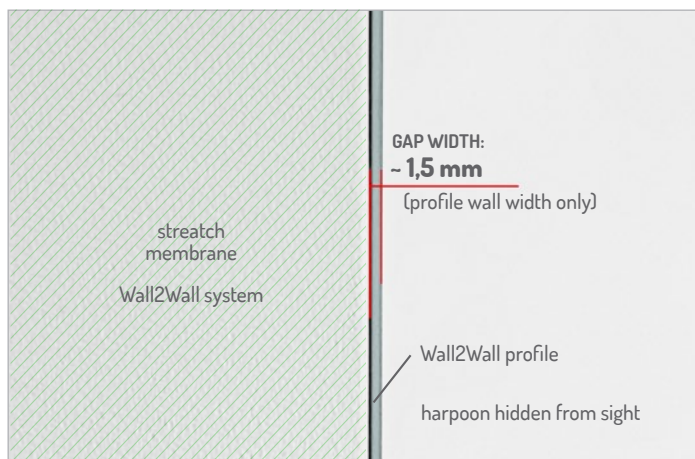

light, acoustic and decorative panels

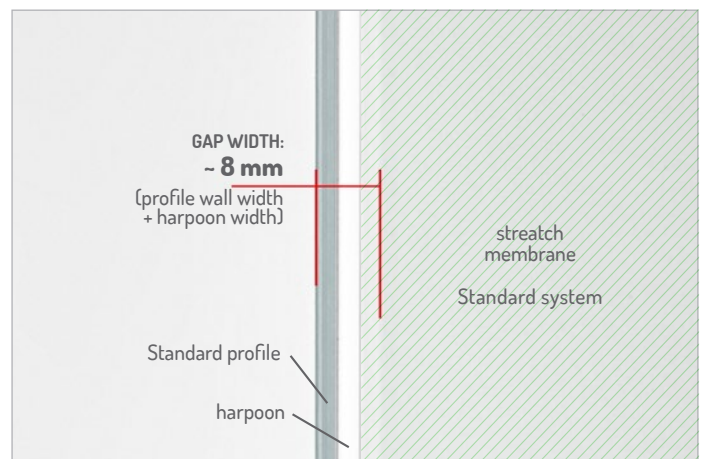

No installation gap - see the difference

The main advantage of our original DPS Wall2Wall system is the lack of a visible gap between the stretch membrane surface and the outer wall of the profile. This is perfectly illustrated by the comparison picture below: the left side shows the installation of a membrane in the Wall2Wall system, while the right one depicts the Standard system.

Standard SYSTEM

Advantages of the DPS Wall2Wall no-gap mounting system

The W2W system can be used in combination with a wide range of DPS decorative coatings from all basic groups: Laque, Satine, Matt and Transparent. The wide range of mounting profiles available makes it easy to create both flat and three-dimensional designs of up to 25 m².

AESTHETIC FINISH IN THE CORNERS

In the Wall2Wall system, the PVC harpoon is entirely out of sight, and thanks to the precise and aesthetically pleasing junctions on the membrane edges, the arches and corners feature an extremely stylish finish. This is particularly important when installing small membranes, such as light panel elements.

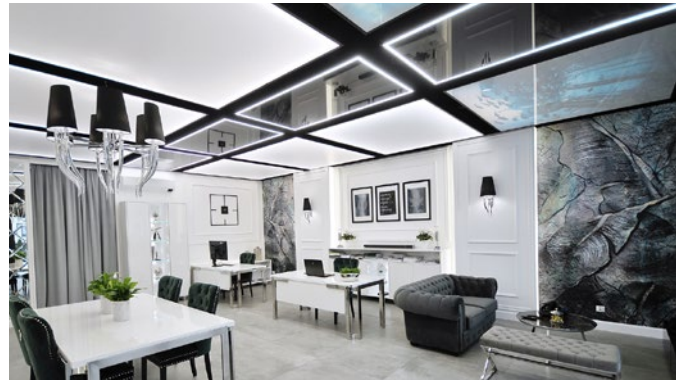

QUICK, TOOL-FREE INSTALLATION

With the Wall2Wall system, installers do not need any specialised tools to mount the membrane itself. Once the membrane is heated, the installation is carried out by hand, making the process quicker and easier.

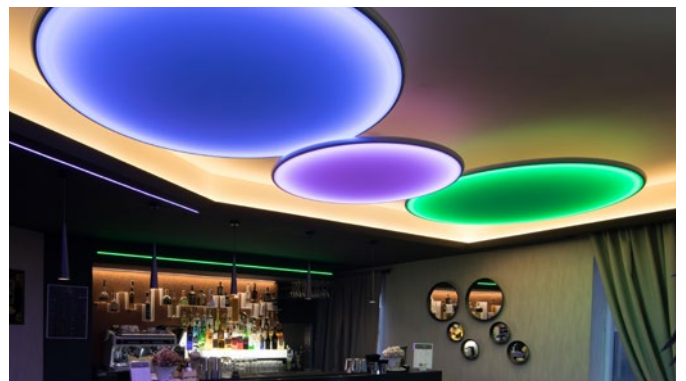

COMPATIBILITY OF SYSTEMS

The wide range of aluminium mounting profiles of the Wall2Wall system can be freely combined with other DPS systems according to project requirements and conditions. This profile system is also used for the installation of Trendero W2W textile walls and ceilings.

A PLETHORA OF SHAPES AND COLOURS

The Wall2Wall system empowers you to bring an extraordinary finish and original look to the surface. Choose from a range of over 120 colours with various textures or customise it with any printed design to create a one-of-a-kind, designer space.
